Until now, our research updates have been written documents. But if you like watching videos and listening to podcasts, this update is for you.

First, video introductions to our elk hoof disease research team are now online. We currently have four students investigating various aspects of elk hoof disease. Three students are pursuing their PhD and one student wrapping up a master’s degree. You can hear about each student’s background and research by watching their individual 1-minute videos. Many thanks to veterinary student Lucas Boatwright for producing the videos.

If you’re interested in hearing a more in-depth discussion of our research, we have two options. First, a podcast that was recorded for Wildlife Health Connections. The podcast is available on common platforms like Apple podcasts and Spotify. Alternatively, you can click this link then scroll to the bottom of the webpage and click the green button to start listening.

Finally, if you missed the webinar we presented on elk hoof disease in September, there is still time to watch the video. Follow the link and then scroll to the 1:32 time mark to watch the recording.

And if you still want more, as always, you can learn more at our WSU elk hoof disease website or by contacting us.

Margaret A. Wild, DVM, PhD
